

The whole forecast on one screen.

Now, the next few hours, the week ahead, and the rain on its way – without scrolling. Then the rabbit holes.

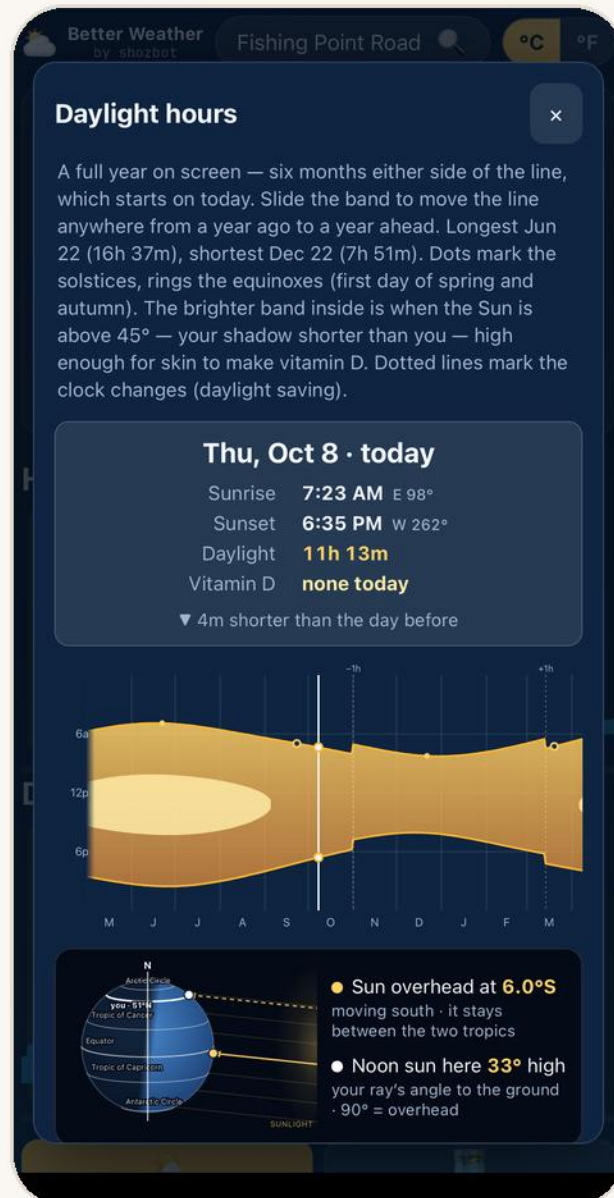

Tap the moon.

The real lunar surface, lit as it is right now. Scrub it hour by hour — then tap Find the Moon and the phone points you at it.

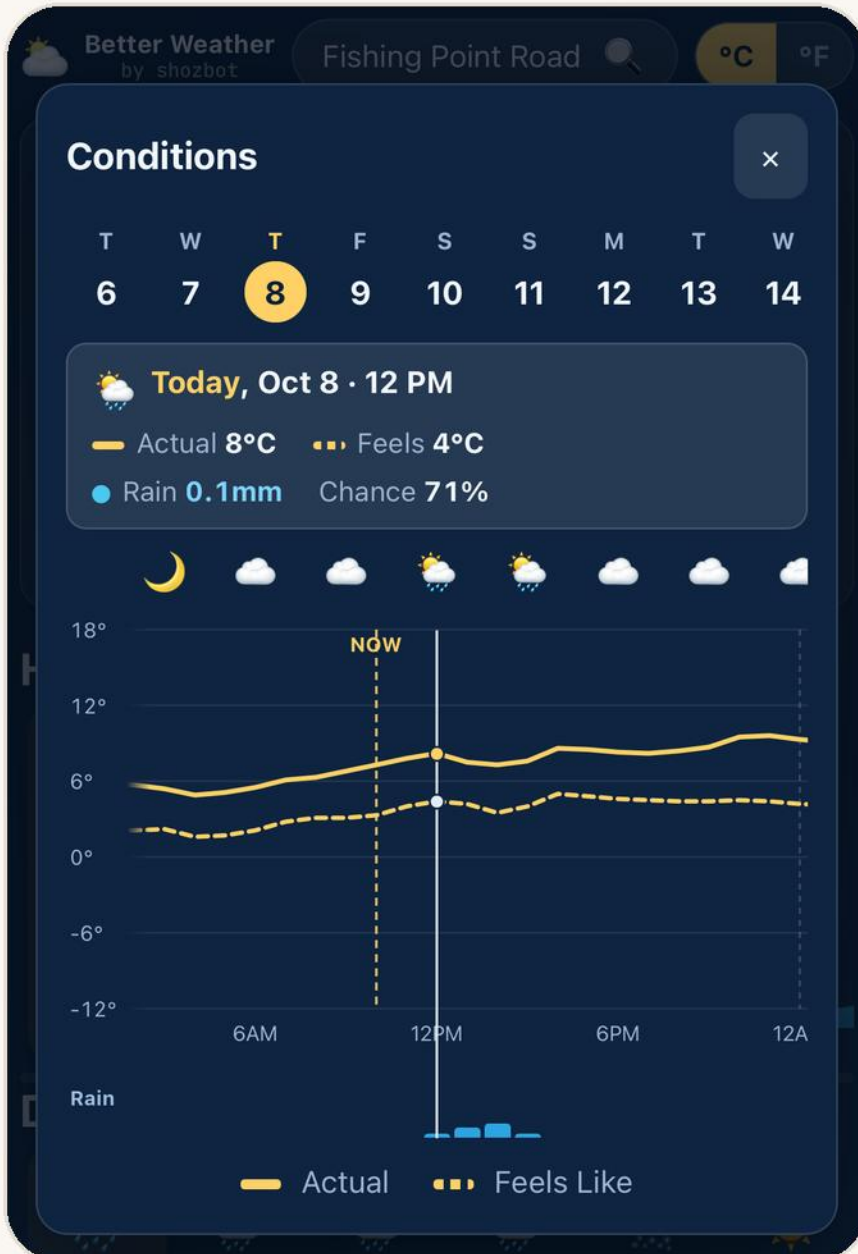

Daylight through the year.

A full year on one screen. The brighter band is the vitamin D window. On October 8th at 51°N it already reads “none today”.

Tap an hour or a day.

That day's temperature and feels-like, a cursor that reads the exact hour, and the rain underneath.

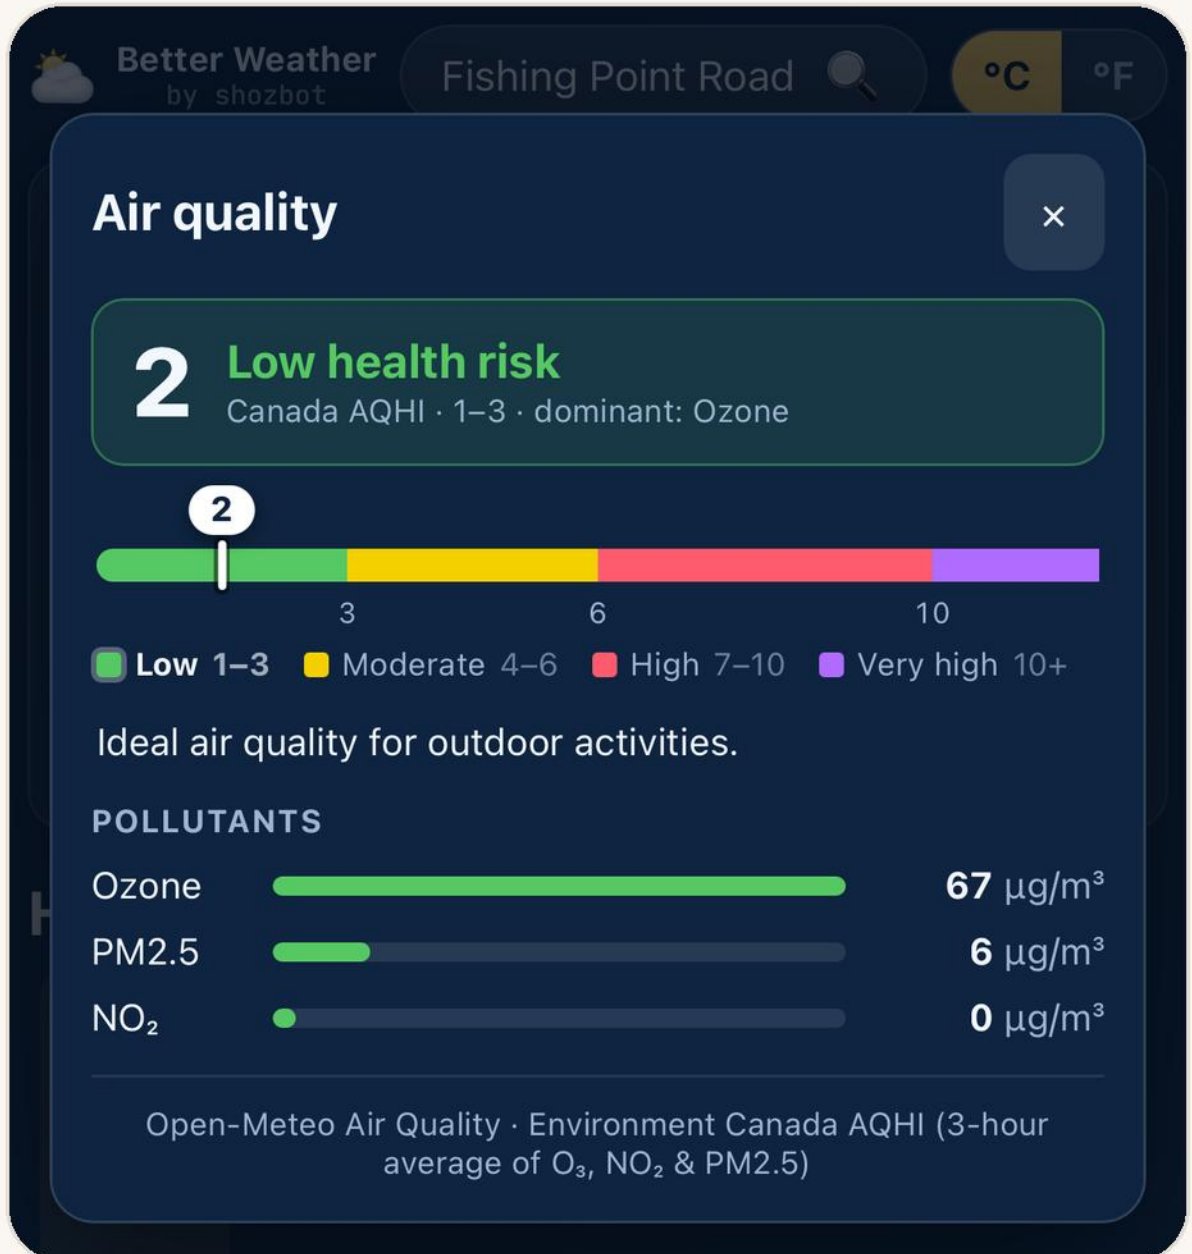

Wind and gusts, hour by hour.

Light to severe, arrows pointing the way it blows, and a readout for any hour you drag to.

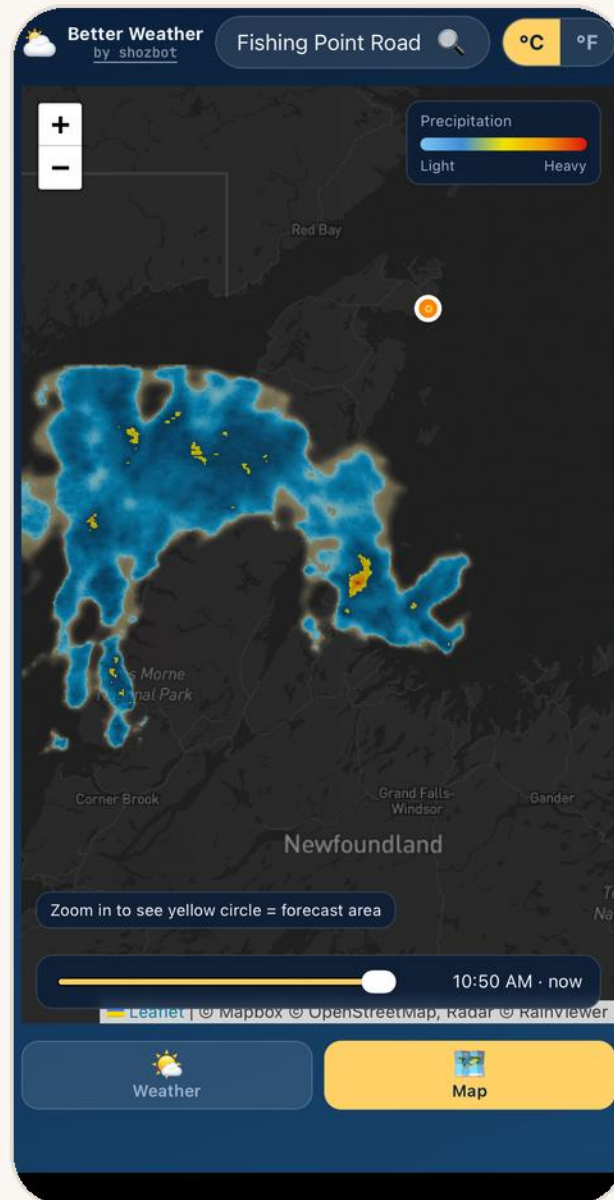

Air quality, explained.

Canada's AQHI here, the US AQI elsewhere — where your reading sits on the scale, and the pollutants behind it.

Live radar you can rewind.

Animated precipitation over a real map. Drag back through the last few hours, or forward into what's coming.

Free. No ads. No account.

Add it to your home screen and it runs like an app – full screen, and it works offline from the last forecast.
